Re: WT Docket No. 16-421

I strongly oppose the proposed streamlining of 5G antenna infrastructure throughout cities and rural areas. I also oppose any preemption of local zoning control over the siting of small antennas in my community or on my property.

In 2016 a \$25-million dollar study was released by the National Toxicology Program which released findings demonstrating that cell phone radio frequency causes malignant brain and heart tumors. It concerns me greatly that with the Distributed Antenna System there would be no way to gain distance from the blanket of radio frequency deployed in all working and living areas. Millions of small antennas would expose pregnant women, children, the immune compromised, wildlife and our entire ecosystem to its high frequencies.

For these reasons and more I cannot imagine having a cell tower in front of my home irradiating me 24/7 with pulsed, modulated, millimeter waves.

Please stop the rollout of additional wireless infrastructure to protect an unsuspecting and vulnerable public from further radiation exposure.

Respectfully,

Margy Stewart
